Halifax International Airport

PROJECT DETAILS

LOCATION:
ATLANTIC CANADA

MARKET SECTOR:
AIRPORT

DELIVERY METHOD:
BID AND SPEC

We provided mechanical construction services for a 200,000 square foot addition and renovation project at Halifax International Airport. The project improved the airport's international trans-border and commuter bag screening facilities.

Based on prior experience working at the airport, we were able to bring our significant knowledge of the airport to bear. We successfully performed the work around existing airport operations, including installing a defuge sprinkler system to protect passenger transit areas.

Although through the course of the project the scope nearly doubled in size, we held to a tight schedule and all mechanical work was completed on time.
