Ottawa International Airport

PROJECT DETAILS

LOCATION:
ONTARIO – GREATER OTTAWA

MARKET SECTOR:
AIRPORT

DELIVERY METHOD:
BID AND SPEC

This new passenger terminal at the Ottawa Macdonald-Cartier International Airport included a 645,000-square-foot building, 15 new gates, links to the existing terminal and new parking structure, and an elevated road to the third floor.

We provided full mechanical contracting and fabrication for the project, which consisted of substantial new construction completed in two phases. The Airport remained open and fully operational with minimal disruptions throughout the construction and renovation process while maintaining an emphasis on the passenger experience and express service with a high tech presence.
