New Construction & Renovations

Queensway Carleton Hospital (QCH) serves a population of over 400,000 in western Ottawa and the Ottawa Valley. Modern Niagara provided all mechanical systems and services for a renovation and new building project that relocated the hospital's obstetrics program and expanded its emergency, inpatient, ICU, and surgery capacity. The project also supported a new Cancer mandate and Dialysis service.

Our work included piping, heating, sheet metal fabrication, ventilation, medical gas systems, in-slab floor heating, and building controls.

Our careful project management and coordination took existing hospital operations into consideration. Construction and renovations were managed around continuous occupancy of the building, and accommodated infection control measures to prevent the migration of dirt and dust.
