Cresmont Pump Station

PROJECT DETAILS

LOCATION:
ALBERTA

MARKET SECTOR:
MUNICIPAL

Cresmont is a new residential community development in the City of Calgary. Its new domestic water pump station was designed to meet present and future water demands for the area.

Modern Niagara provided all mechanical elements for this pump station project, including installation of the process piping, four 4000 lb. water distribution pumps, building heating, and controls.

Special attention was given to the schedule and phasing of this project due to long lead times on the large domestic water rated valves and equipment, as well as the epoxy-coated process piping. Clear communication with the general contractor and careful coordination with other sub-trades were also critical to ensure the project progressed smoothly and safely.

The Cresmont water pump station adheres to Calgary's strict health & safety specifications, and will help satisfy the increasing demand for clean drinking water for this new and growing North West Calgary community.
