

## Vernon Jubilee Hospital

Location: British Columbia & Yukon

Market Sector: Healthcare

Delivery Method: Mechanical Construction

The Vernon Jubilee Hospital (VJH) is in the Okanagan health service area and responsible for providing core medical and surgical specialty services to patients throughout its service area.

From 2009-2011, we were part of the construction team for the hospital's 231,000 sq.ft. expansion, under a P3 partnership. We provided all HVAC, plumbing, medical gas, sprinkler systems, and control system integration for the new hospital. Highlights of our work include:

- Low-temperature heat recovery system
- Electronic filters to kill biological contaminants
- A water treatment system
- A propane back-up system

We successfully managed tight scheduling of major deliveries through bulk-ordering and onsite inventory.

The hospital opened in May 2011 after a 2-year build. It was completed on schedule and under budget.
